

Land substation refined search areas

We are currently considering three refined areas of search for the location of the land substation. These are marked as blue, green and pink on the map below. The substation will be sited within one of these areas of search and will not occupy the full area.

The Blue Site

- Close access to Jade Business Park Access Road.
- Consolidates development around the junction with the A19 such as Dalton Retail Park.
- Careful consideration of nearby residential properties will be required.

The Green Site

- On brownfield land.
- Allows for a direct connection to the substation.
- Good alignment with the central cable landfall.
- Sits alongside existing infrastructure around the 400kV Hawthorn Pit substation and Jade Business Park.

The Pink Site

- Relatively isolated site with reduced potential for residential impacts.
- Access from Jade Business Park Access Road to the North, with direct access from the A19.
